Presentation Quality Assessment

Tanzania Livestock Policy — English and Kiswahili decks

Prepared 9 November 2026. Quality checks performed on generated PowerPoint and PDF outputs.

Validation summary

Check	Result
Deck structure	24 slides in each language; corresponding sections and numbering.
Files	Editable .pptx and exported .pdf produced for English and Kiswahili.
Evidence fidelity	Figures and claims derive from the two supplied assessment reports, NBS AASS reports and NBS Statistical
Cross-language parity	Same slide structure, chart values, judgements and proposed actions used in both versions.
Charts / diagrams	Created as editable PowerPoint shapes; selected PNG companion assets included.
Branding	Official Parliament logo downloaded from parliament.go.tz. No official brand guide was located; palette descr
Photography	Two Tanzania-specific Wikimedia Commons images used with CC BY-SA licences and source/creator attribu
Policy status	Presentation is analytical research, not an official Parliament resolution or Government programme.

Evidence and presentation caveats

• AASS livestock participation estimates (60.6%, 57.3%, 76.9%) are reproduced as published; the change to 2024/25 is not reconciled or attributed.

• The 8.9% livestock-information access figure has a denominator ambiguity; 6.9% results if the displayed total agricultural-holdings denominator is applied. NBS clarification is requested.

• Only about 29% of milk output was reported sold. The remainder is not categorised as household use, informal trade, processing or loss.

• The livestock GDP share is at current market prices for Tanzania Mainland; it is not a real-output growth measure.

• The 61.8% drought / erratic-rainfall statistic is for agricultural households overall. The 7.2 percentage-point difference is livestock participation by household-head sex, not a measure of service equity.

• Animal health, policy spending, poverty reduction, environmental outcomes and causal impact are not rated due to missing evidence.

• No regional map is used because the selected evidence does not provide a consistent regional comparison for the indicators shown.

• Text overflow and rendering were checked through PDF export, slide text extraction, page-count checks and visual inspection of representative rendered pages. Review in the target PowerPoint installation before formal presentation is recommended.

Visual identity and permissions

The official Parliament logo was downloaded from the official website. The website did not provide an accessible brand-guidelines document during preparation; navy, blue, green and gold are therefore an approximation based on the logo and visible official site assets, not a claimed official palette. The logo source page did not state reuse terms; confirm permission before external publication. The two photographs are attributed CC BY-SA 4.0 and CC BY-SA 3.0 respectively; follow the linked licence terms for redistribution and adaptations.
