AB CONSULT ▪ PARLIAMENTARY CAPACITY BUILDING INITIATIVE

APPLICATION OF ARTIFICIAL INTELLIGENCE IN PARLIAMENTARY RESEARCH

Day 4 Practical Presentation

Multi-Criteria Policy Analysis (MCPA) & Stakeholder Simulations

Lead Facilitator:	Eng. Dr. Kadeghe Fue, PhD	**Document Ref:**	SUA/COEBS/PARL-AI/DOC-04
Target Cohort:	Parliamentary Researchers & Clerks	**Program Dates:**	Thursday, 12th November 2026

From Description to Decision

Why Parliamentary Committees Require Multi-Criteria Policy Analysis

The Descriptive Trap

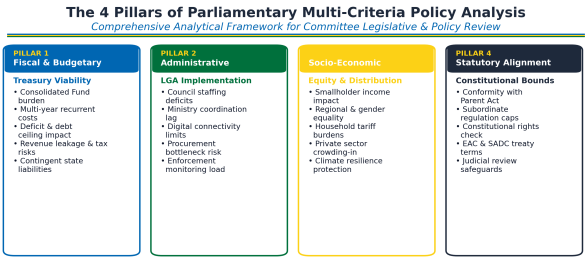

- Most research briefs merely **summarize** what the draft bill states.
- Committees are left without clear comparative options or trade-off assessments.
- Unintended economic and social consequences emerge after bill enactment.

The MCPA Methodology

- Systematically evaluate **competing policy alternatives** against standard criteria.
- Simulate reactions from **key stakeholder groups**.
- Give committee leadership defensible amendments backed by empirical scoring.

The 4 Pillars of Parliamentary MCPA

Rigorous Assessment Framework for Legislative Proposals

The 4 Evaluation Pillars

1. **Fiscal Sustainability:** Revenue yield, debt impact, and administrative costs.
2. **Economic Equity:** Distributional impact on vulnerable & rural citizens.
3. **Admin Feasibility:** Institutional capacity of TRA / local councils.
4. **Legal Alignment:** Compliance with Constitution & EAC treaties.

Analytical Transition Architecture

Transforming Raw Legislative Text into Strategic Option Sets

The Parliamentary Analytical Transition

Transforming Executive Single-Choice Advocacy into Rigorous Multi-Option Scrutiny

ADVOCACY — TRADITIONAL EXECUTIVE ADVOCAC

Single-Solution Executive Stance

'We recommend Option A because it solves the sector problem.'

[Oversight Blindspots in Single Advocacy]
- Conceals viable alternative policy designs
- Obscures long-term recurrent Treasury liabilities
- Downplays LGA administrative implementation hurdles
- Ignores regressive distributional burdens on citizens

Parliamentary Scrutiny Shift

SCRUTINY — PARLIAMENTARY OPTIONS SCRUTI

Multi-Criteria Trade-off Evaluation

- Option A (Capital Subsidy): Rapid rollout but High Treasury Liability & Leakage Risk.
- Option B (Decentralized LGA Grants): Moderate Fiscal Cost but Demands Local Council Capacity.
- Option C (Tariff Regulation Reform): Minimal Budget Burden but Requires Primary Act Amendment.

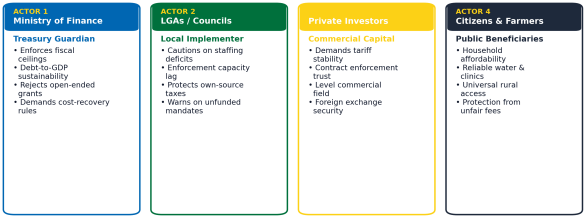

Empowers Committees to debate real-world trade-offs.

4-Way Stakeholder Perspective Simulation

Simulating Competing Policy Pressures in Committee Rooms

The 4-Way Adversarial Stakeholder Simulation Architecture

Stress-Testing Policy Proposals Against Conflicting Institutional and Public Priorities

Simulated Groups

Treasury / TRA: Focus on revenue targets and compliance.

Private Sector (TPSF): Competitiveness, capital flight, and investment security.

Civil Society / Citizens: Cost of living, basic social services, equity.

Local Government (TAMISEMI): Revenue sharing and grassroots service delivery.

Constructing the Policy Trade-Off Matrix

Evaluating 3 Concrete Policy Options for the Committee

Policy Option	Fiscal Yield	Social & Equity Impact	Strategic Recommendation
Option A: Status Quo (Zero reform)	Low revenue growth; persistent collection leaks	No immediate citizen backlash; high long-term deficit	**Rejected:** Deficit expands; unsustainable.
Option B: Blanket Universal Levy	High immediate revenue (TZS 450B estimated)	Regressive; heavily hits rural smallholders	**Modified:** Introduce exempt basic consumer goods.
Option C: Tiered Progressive Model	Moderate-High yield (TZS 380B)	Progressive; shields low-income households	**Recommended:** Best multi-criteria balance.
